

Features Capabilities

Following are some of the key features functions of the TWM® IT System:

- Provides a mechanism to track and report on waste and by-product management from a regulatory, commercial, financial, environmental perspective
- Allows large organisations to consolidate waste reporting information to assist with corporate reporting requirements
- Allows organisations to calculate green house gas reductions associated with waste and by-product recycling and reuse initiatives
- Allocates the cost of waste management to various sites and operations centres promoting a user pays approach.
- Allows wastes to be tracked to both on-site and off-site facilities.
- Manages all due diligence requirements for waste transport and disposal contractors
- Provides an array of waste reporting options (e.g. % recycled, cost vs. waste type) to assist in waste minimization efforts.
- Allows the user to track load specific compliance information
- Allows the organisation to customise the access of users to the modules to maintain the security of information (eg commercial information)
- All information is stored on a secure remote database
- Satisfies the various states and territories statutory waste tracking requirements (e.g. EPA tracking).
- Allows the user to control waste service frequencies by ordering waste management services over the internet.

Full implementation and support services are available nationally, specializing in remote site service.
